Millennium Evo Battery Watering System

The Millennium Evo Battery Watering System makes the difficult task of watering industrial batteries elementary. It consists of automatic shut-off valves, interconnected with tubing, that replace the existing vent caps. A quick coupling allows the system to be connected to a water supply. Once connected, water flows into each cell until it reaches the correct level. A flow indicator built into the water supply tells the operator when filling has been completed. The entire process takes just 30 seconds per battery.

Cost Savings

After installing your Millennium Plus+ system, you will realize other cost benefits including extended battery life; increased performance; and cleaner floors, equipment and battery tops.

Time Saving Convenience

Snap on/snap off water connections and fast filling turn the often ignored task of watering batteries into a quick, simple task allowing you to fill each battery in 30 seconds or less!

Safety

Fill batteries without having to remove the vent covers. Avoid battery acid burns, ruined clothing, and noxious fumes. Add optional flame arrestors to prevent ignition of flammable battery cell gases.

Extend Battery Life & Performance

A properly watered battery lasts longer and performs better. Overfilling a battery results in loss of acid, while charging with low electrolyte levels will result in permanent damage to the lead plates. Both will result in loss of capacity and life expectancy.
